

Office Closed Script

Saving Lives:
Integrating
Vaccines for
Adults Into
Routine Care

If your practice has an existing “office closed” recording, it can be tailored to highlight important adult immunization messages. This suggested script can be incorporated within the office’s recording, urging patients to be proactive about their health by asking about vaccinations.

This is the office of **[NAME OF PROVIDER]**.

Did you know that most Americans who die each year from vaccine-preventable diseases are adults? There are many safe and effective vaccines available but most adults don’t take advantage of them.

Our office has vaccines recommended by the Centers for Disease Control and Prevention (CDC) to protect you from many serious diseases. Your annual flu vaccine may not be the only vaccine you need this year.

Please call back during business hours to schedule an appointment or talk with us during your next office visit to get more information about which vaccines you may need.
