Make Sure You Don't Miss Out on These Vaccines!

- Vaccines can protect adults from some serious infectious diseases.
- **Influenza** – hospitalizes 200,000-plus Americans annually; kills 3,000 – 49,000
 - **Pneumococcal Disease** – causes pneumonia, meningitis, and blood infection; can kill in just a few days
 - **Pertussis (Whooping Cough)** – sickens millions of US adults annually. Infected adults can pass it on to infants who are at highest risk of death from whooping cough.
 - **Shingles** – can cause a severe pain syndrome that is difficult to treat and can last for months or years after the shingles rash heals
 - **Human Papillomavirus (HPV)** – causes many types of cancer including cervical, anal, and other genital cancers, as well as head and neck cancers
 - **Hepatitis B** – infects the liver and can lead to cirrhosis, liver cancer, and death in many of those infected; kills about 5,000 people annually in the US

Facts About Adult Vaccination

Some Things From Childhood Are Best Left Behind – Vaccines Aren't One of Them

Unfortunately many adults don't get the vaccines they should, leaving them vulnerable to illness. Adults need vaccines to protect them against many serious illnesses, including:

- | | |
|-------------------------------------------|-------------------------------|
| ■ Tetanus, diphtheria, and whooping cough | ■ Hepatitis B |
| ■ Influenza | ■ Human papillomavirus (HPV) |
| ■ Pneumococcal disease | ■ Hepatitis A |
| ■ Shingles | ■ Measles, mumps, and rubella |

Vaccines can help protect you from these and other potentially deadly illnesses.
